

Structure

A report-class document gets the chapter heading above: the label in the accent colour, the title in the body face at display size. Nothing needs setting per document.

Note

Use `houseinfo` for rationale and context — the paragraph a reader can skip without losing the thread. Grey, quiet, no urgency.

The expensive mistake

Use `housewarn` for the thing that costs money if it is missed. The optional argument overrides the default title.

And `housebox` stays the loud accent-framed box for the one thing that matters on the page. One per page, at most.

Reference tables

Narrow fixed-width columns use the `L` column type, which is ragged right. Justified text in a 4 cm column produces rivers of whitespace.

Setting	Key	Default
Row shading is one macro	<code>some_option_key</code>	100.00
Ragged right, no rivers	<code>another_key</code>	250.00
Booktabs rules only	<code>third_key</code>	12.50

Diagrams

Three node styles, two edge styles. Branch labels mask the line underneath.

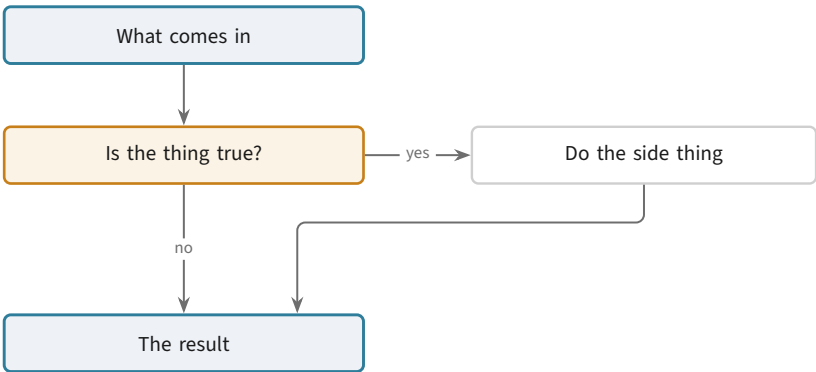

Figure 1.1. Caption styling, the float pin, and every diagram style at once.

Figures are pinned with [H]. A diagram that drifts two pages away from the paragraph explaining it is worse than a slightly short page.

Alignment

Boxes in a row are anchored by their top-left corners rather than centred, so the tops align even when one box wraps onto extra lines and hangs lower.

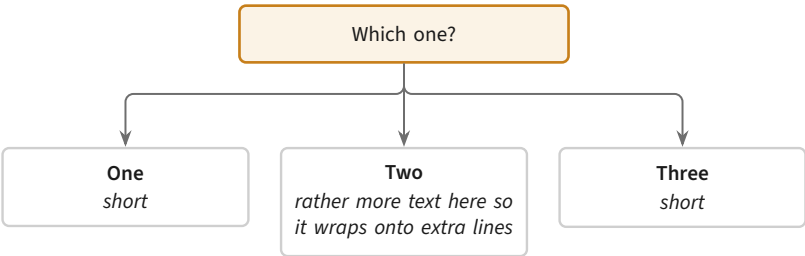

Figure 1.2. Tops align; the taller box hangs lower.

Node padding is set separately for the horizontal and vertical axes. One combined inner sep starves tall content — ceilings, fractions, big parentheses — of depth, and the glyph collides with the bottom border: [quantity ÷ units].

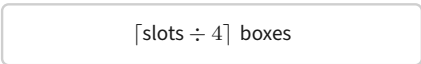

Figure 1.3. Ceiling delimiters clear of the border.

Cross-references resolve on the second pass: Figure 1.1. Checkbox: ☐. Status chip: ■. And the muted note macro, for the aside that should not compete with body text.

Where the rules live

File	What it decides
house.tex	Every colour, font, macro and package. Edit once, every document restyles.
DIAGRAMS.md	Node vocabulary and the layout rules — edge routing, alignment, caption spacing.
LONGDOC.md	Chapters, callouts, captioned figures, cross-referencing.
EDITORS.md	Wiring the style into TeXworks, VS Code or Overleaf.

Build it through the script

The build script is what puts the style directory on TEXINPUTS and the bundled fonts on OPENTYPEFONTS. Compile by hand and neither resolves.
